GCP GLASS FILL

GCP GLASS FILL is a new patented monomer free carbomised nano glass restorative cement with specially designed filler and fluor/hydroxy apatite particles for extremely reduced solubility, superior flexural and compressive strength and high wear resistance. Its excellent features set it apart from other glass-like restoratives.

Excellent results are achieved in the restoration of almost all indications:

- Class I, II, III, and V
- milk- and permanent elements
- cervical fillings
- build up material (for crown & bridge)

GCP GLASS FILL:

- safe, biocompatible & monomer free, does not contain resins, solvents or heavy metals. Underlining or etching of enamel and dentin is contra-indicated.
- contains fluoride and is acid resistant. Natural chemical bonding to dentin and enamel for optimal fixing of edges and margins.
- is available in capsules. Easy to activate, easy to mix and easy to apply.
- has a low solubility, high wear resistance and high flexural and compressive strength. GCP GLASS FILL contains fluor/hydroxy apatite to aid remineralisation and provide protection against caries and repair of existing caries (pseudo-enamel).*
- is radiopaque which facilitates postoperative diagnosis.
- is available in Vita shades: A1, A2, A3, A3.5, C2, C3, DG.

FAST - command setting: fast, controlled setting utilizing a high energy lamp.

EASY - easy to apply in just one single layer without underlining, no etching or additional bonding step is necessary.

ACTIVE CARIES REPAIR - added nano fluor/hydroxy apatite particles aid remineralisation, natural bonding.

SUPERIOR STRENGTH - high compressive and flexural strength, high wear resistance, high shear bond, low (acid) solubility; no shrinkage/expansion and leakage.

- MONOMER FREE
- BPA FREE
- COMMAND SET 60s.
